

**NAME**

CURLOPT\_NEW\_DIRECTORY\_PERMS – permissions for remotely created directories

**SYNOPSIS**

#include &lt;curl/curl.h&gt;

CURLcode curl\_easy\_setopt(CURL \*handle, CURLOPT\_NEW\_DIRECTORY\_PERMS,  
long mode);**DESCRIPTION**

Pass a long as a parameter, containing the value of the permissions that will be assigned to newly created directories on the remote server. The default value is *0755*, but any valid value can be used. The only protocols that can use this are *sftp://*, *scp://*, and *file://*.

**DEFAULT**

0755

**PROTOCOLS**

SFTP, SCP and FILE

**EXAMPLE**

TODO

**AVAILABILITY**

Added in 7.16.4

**RETURN VALUE**

Returns CURLE\_OK if the option is supported, and CURLE\_UNKNOWN\_OPTION if not.
