NAME
  CURLOPT_NOBODY – do the download request without getting the body

SYNOPSIS
  #include <curl/curl.h>

  CURLcode curl_easy_setopt(CURL *handle, CURLOPT_NOBODY, long opt);

DESCRIPTION
  A long parameter set to 1 tells libcurl to not include the body-part in the output when doing what would otherwise be a download. For HTTP(S), this makes libcurl do a HEAD request. For most other protocols it means just not asking to transfer the body data.

  Enabling this option means asking for a download but without a body.

DEFAULT
  0, the body is transferred

PROTOCOLS
  Most

EXAMPLE
  curl = curl_easy_init();
  if(curl) {
   curl_easy_setopt(curl, CURLOPT_URL, "http://example.com");

   /* get us the resource without a body! */
   curl_easy_setopt(curl, CURLOPT_NOBODY, 1L);

   /* Perform the request */
   curl_easy_perform(curl);
  }

AVAILABILITY
  Always

RETURN VALUE
  Returns CURLE_OK
