NAME

CURLOPT_TIMECONDITION – select condition for a time request

SYNOPSIS

#include <curl/curl.h>

CURLcode curl_easy_setopt(CURL *handle, CURLOPT_TIMECONDITION, long cond);

DESCRIPTION

Pass a long as parameter. This defines how the *CURLOPT_TIMEVALUE(3)* time value is treated. You can set this parameter to *CURL_TIMECOND_IFMODSINCE* or *CURL_TIMECOND_IFUNMODSINCE*.

The last modification time of a file is not always known and in such instances this feature will have no effect even if the given time condition would not have been met. *curl_easy_getinfo(3)* with the *CURLINFO_CONDITION_UNMET* option can be used after a transfer to learn if a zero-byte successful "transfer" was due to this condition not matching.

DEFAULT

CURL_TIMECOND_NONE (0)

PROTOCOLS

HTTP, FTP, RTSP, and FILE

EXAMPLE

TODO

AVAILABILITY

Always

RETURN VALUE

Returns CURLE_OK
