### **NAME**

```
ares_parse_soa_reply - Parse a reply to a DNS query of type SOA
```

### **SYNOPSIS**

```
#include <ares.h>
```

```
int ares_parse_soa_reply(const unsigned char* abuf, int alen, struct ares soa reply** soa out);
```

# **DESCRIPTION**

The ares\_parse\_soa\_reply function parses the response to a query of type SOA into a struct ares\_soa\_reply. The parameters abuf and alen give the contents of the response. The result is stored in allocated memory and a pointer to it stored into the variable pointed to by soa\_out. It is the caller's responsibility to free the resulting soa\_out structure when it is no longer needed using the function ares\_free\_data

The structure *ares\_soa\_reply* contains the following fields:

# **RETURN VALUES**

ares\_parse\_soa\_reply can return any of the following values:

# ARES\_SUCCESS

The response was successfully parsed.

# ARES\_EBADRESP

The response was malformatted.

### ARES\_ENODATA

The response did not contain an answer to the query.

### ARES\_ENOMEM

Memory was exhausted.

### **AVAILABILITY**

This function was first introduced in c-ares version 1.9.0.
