

Automotive Message Broker

Purpose
Design

Purpose: Problems to Solve

- Problems:
- Vehicle networks contain critical information apps need
- Vehicle network protocols are many
- Vehicle message payloads are private

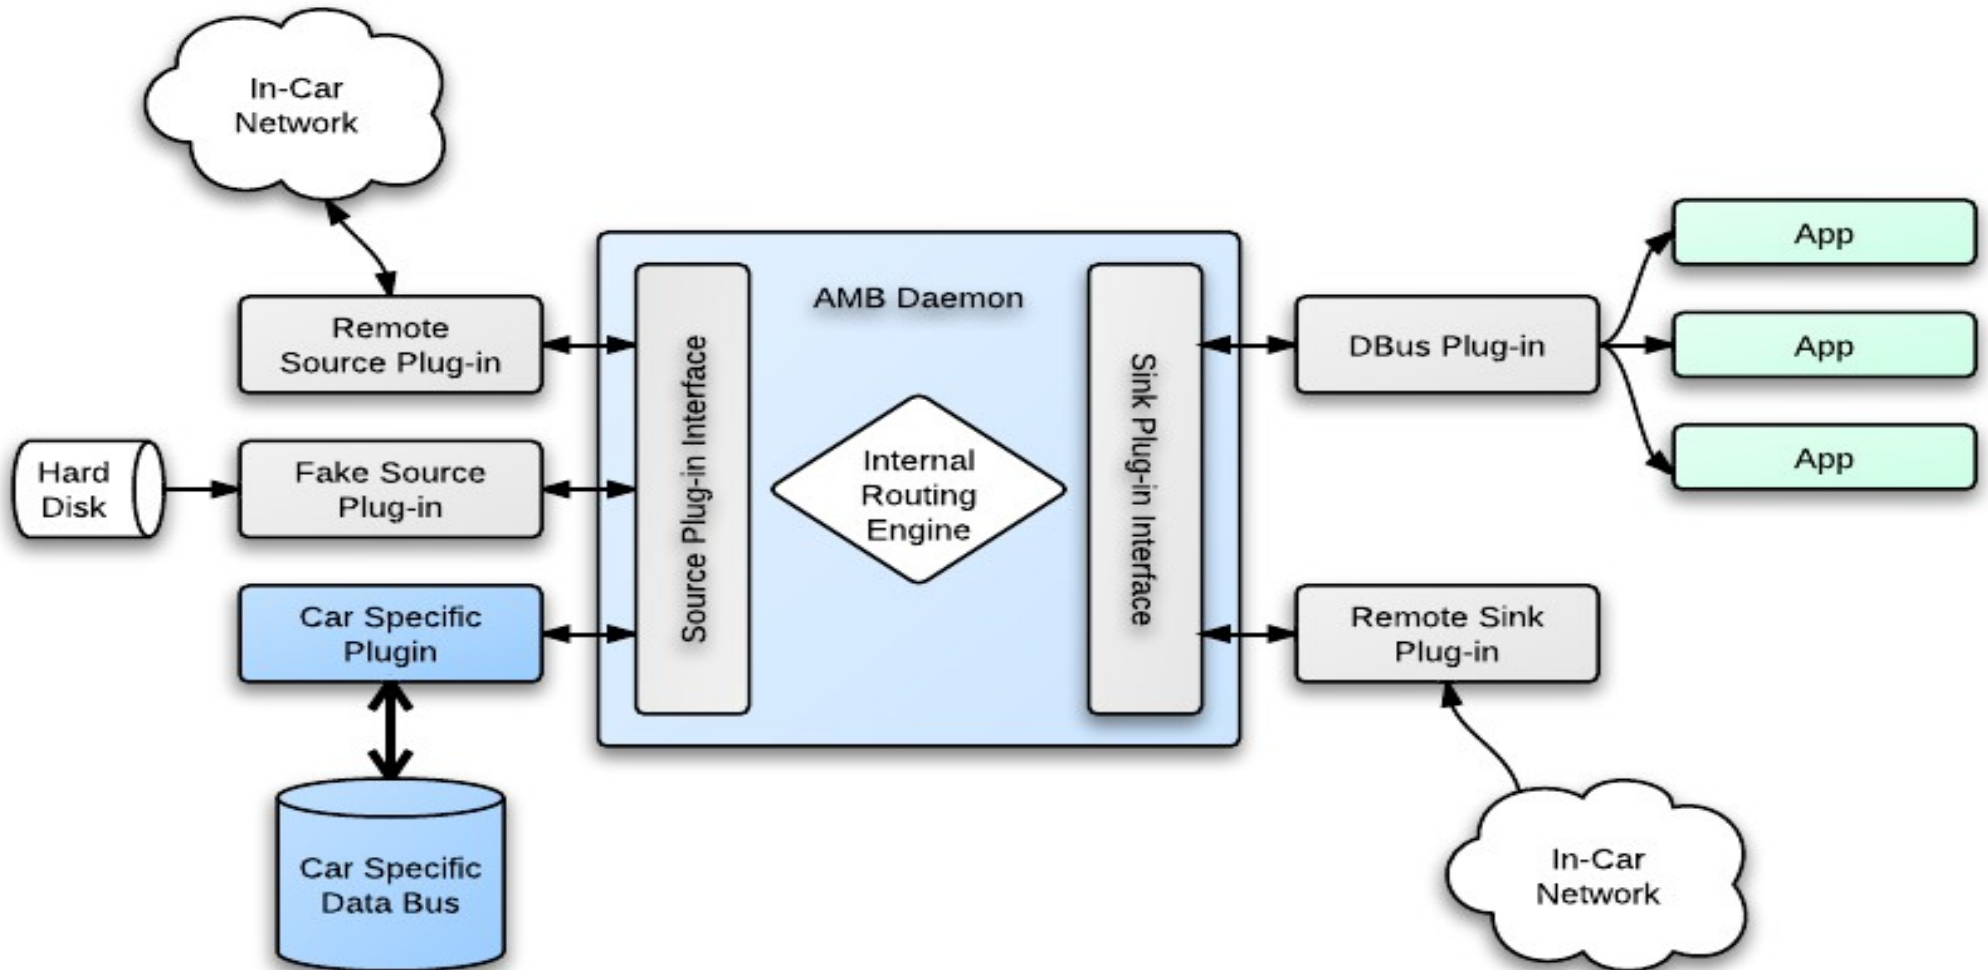

How do applications get to this information?

Automotive-message-broker abstracts the details of the network away from applications and provides a standard API for applications to easily get the required information.

Design: Components

Provided by amb:

- Source plugin infrastructure
- Abm core daemon
- Sink plugin infrastructure

Design: Flexibility
