Anchorblock

Example of some markup text, a long one at that, using anchors indifferent ways, like some random text.
Something more useful is to have actions over urls, either in directform: http://www.enlightenment.org or with more random text.
In any case, the href part of the anchor is what you will receive onthe callback, so it's a good idea to keep anything needed to identifywhatever is linked at in there.
Playing to be a phone, we can also identify contacts from our addresslist, like this dude here Thomas Anderson, orphone numbers +61 432 1234.
