NAME
      CURLOPT_NOBODY – do the download request without getting the body

SYNOPSIS
      #include <curl/curl.h>

      CURLcode curl_easy_setopt(CURL *handle, CURLOPT_NOBODY, long opt);

DESCRIPTION
      A long parameter set to 1 tells libcurl to not include the body-part in the output when doing what would otherwise be a download. For HTTP(S), this makes libcurl do a HEAD request. For most other protocols it means just not asking to transfer the body data.

      Enabling this option means asking for a download but without a body.

DEFAULT
      0, the body is transferred

PROTOCOLS
      Most

EXAMPLE
```
curl = curl_easy_init();
if(curl) {
  curl_easy_setopt(curl, CURLOPT_URL, "http://example.com");

  /* get us the resource without a body! */
  curl_easy_setopt(curl, CURLOPT_NOBODY, 1L);

  /* Perform the request */
  curl_easy_perform(curl);
}
```

AVAILABILITY
      Always

RETURN VALUE
      Returns CURLE_OK

SEE ALSO
