NAME

CURLOPT_PROXYUSERPWD – user name and password to use for proxy authentication

SYNOPSIS

#include <curl/curl.h>

CURLcode curl_easy_setopt(CURL *handle, CURLOPT_PROXYUSERPWD, char *userpwd);

DESCRIPTION

Pass a char * as parameter, which should be [user name]:[password] to use for the connection to the HTTP proxy. Both the name and the password will be URL decoded before use, so to include for example a colon in the user name you should encode it as %3A. (This is different to how *CURLOPT_USERPWD(3)* is used - beware.)

Use *CURLOPT_PROXYAUTH(3)* to specify the authentication method.

DEFAULT

This is NULL by default.

PROTOCOLS

Used with all protocols that can use a proxy

EXAMPLE

TODO

AVAILABILITY

Always

RETURN VALUE

Returns CURLE_OK if proxies are supported, CURLE_UNKNOWN_OPTION if not, or CURLE_OUT_OF_MEMORY if there was insufficient heap space.

SEE ALSO

CURLOPT_PROXY(3), **CURLOPT_PROXYTYPE**(3),
