## **NAME**

CURLOPT\_CONV\_TO\_NETWORK\_FUNCTION - convert data to network from host encoding

## **SYNOPSIS**

#include <curl/curl.h>

CURLcode conv\_callback(char \*ptr, size\_t length);

CURLcode curl\_easy\_setopt(CURL \*handle, CURLOPT\_CONV\_TO\_NETWORK\_FUNCTION, conv callback);

# **DESCRIPTION**

Pass a pointer to your callback function, which should match the prototype shown above.

Applies to non-ASCII platforms. *curl\_version\_info(3)* will return the CURL\_VERSION\_CONV feature bit set if this option is provided.

The data to be converted is in a buffer pointed to by the *ptr* parameter. The amount of data to convert is indicated by the *length* parameter. The converted data overlays the input data in the buffer pointed to by the ptr parameter. *CURLE\_OK* must be returned upon successful conversion. A CURLcode return value defined by curl.h, such as *CURLE\_CONV\_FAILED*, should be returned if an error was encountered.

**CURLOPT\_CONV\_TO\_NETWORK\_FUNCTION** converts from host encoding to the network encoding. It is used when commands or ASCII data are sent over the network.

If you set a callback pointer to NULL, or don't set it at all, the built-in libcurl iconv functions will be used. If HAVE\_ICONV was not defined when libcurl was built, and no callback has been established, conversion will return the CURLE CONV REQD error code.

If HAVE\_ICONV is defined, CURL\_ICONV\_CODESET\_OF\_HOST must also be defined. For example:

#define CURL ICONV CODESET OF HOST "IBM-1047"

The icony code in libcurl will default the network and UTF8 codeset names as follows:

#define CURL\_ICONV\_CODESET\_OF\_NETWORK "ISO8859-1"

#define CURL ICONV CODESET FOR UTF8 "UTF-8"

You will need to override these definitions if they are different on your system.

## **DEFAULT**

**NULL** 

#### **PROTOCOLS**

FTP, SMTP, IMAP, POP3

#### **EXAMPLE**

**TODO** 

## **AVAILABILITY**

Available only if CURL\_DOES\_CONVERSIONS was defined when libcurl was built.

## RETURN VALUE

Returns CURLE\_OK if the option is supported, and CURLE\_UNKNOWN\_OPTION if not.
