NAME
       CURLOPT_DNS_INTERFACE – set interface to speak DNS over

SYNOPSIS
       #include <curl/curl.h>

       CURLcode curl_easy_setopt(CURL *handle, CURLOPT_DNS_INTERFACE, char *ifname);

DESCRIPTION
       Pass a char * as parameter. Set the name of the network interface that the DNS resolver should bind to. This
       must be an interface name (not an address). Set this option to NULL to use the default setting (don't bind to
       a specific interface).

DEFAULT
       NULL

PROTOCOLS
EXAMPLE
       TODO

AVAILABILITY
       Added in 7.33.0. This option also requires that libcurl was built with a resolver backend that supports this
       operation. The c-ares backend is the only such one.

RETURN VALUE
       Returns CURLE_OK if the option is supported, CURLE_UNKNOWN_OPTION if not, or
       CURLE_NOT_BUILT_IN if support was disabled at compile-time.
